

the Sigma Xi Spring Symposium:

Global Change, Disease Ecology, and Evolutionary Management

7th March 2013
2:00 – 5:30 p.m.
3rd Floor Lantern (KL 355)

Human activities are altering climate from local to global scales, causing extinction and redistributing species, and changing our own habitable environments with possibly cascading effects. This symposium will explore these changes, their consequences, and possible sustainable solutions.
